Thermostatic with diverter R97810/R97815

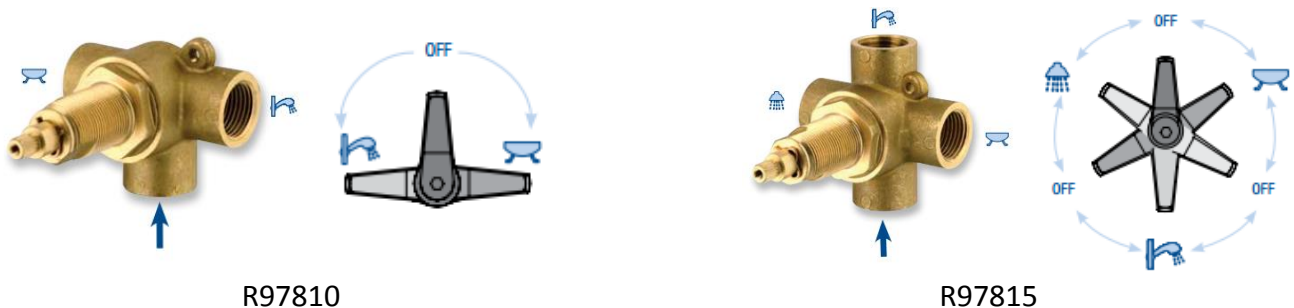

The new Zucchetti built in system makes the **wall installation** of the thermostatic mixer **easier**, even before placing the wall coating and allows the **perfect positioning** to calculate the depth.

The increasing demand for built-in shower system installations has taken Zucchetti to find solutions aimed to **make the plumber's work easier** and to ensure functionality over the time: the product is protected by a plastic shell, which ensures data integrity and easily removable after finishing the installation; the diverter cartridge, the thermostatic cartridge and the filters are easily inspected, as a guarantee of a long life.

Other advantages:

- Small dimension
- Made in brass and in Ecodr hardware compatible with world wide standards
- Only 1 built in body for different external solutions

Diverter working in thermostatic R97810 e R97815

Possibility to choose between 2 3 water outlets or to stop the water flow by positioning on OFF
