

# DISINFECTANT TOWER

VANDAL-RESISTANT

# DISINFECTANT TOWER

## Important characteristics

### Vandal-resistant

- Bottle of hand sanitiser is inaccessible behind top hatch with lock
- If an electric pump is chosen, the batteries are separate from the liquid in the lower compartment
- Robust construction, no loose parts, access hatches are locked with a universal specific key
- The tower is delivered ready for use in protective packaging

### Easy to manage thanks to acrylic inspection window and opening for filling

- Acrylic window in the top right corner shows the hand sanitiser level without having to open the hatch
- The bottle can be topped up through a lockable opening at the top, so the maintenance crew does not have to kneel down every time to check the product level or top up the bottle
- The opening is unlocked with the same key that unlocks the two hatches
- The hand sanitiser bottle can be changed using the removable support in the upper compartment

### Hygiene

- The entire tower is covered in an antibacterial powder coating

### Stability

- Hand sanitiser top-ups and the manual operation of the pump all happen at the top, so the tower is never pushed from the side. The electric pump is touchless
- The large floor surface area protects the tower from being accidentally knocked over

### Product savings

- The opening is used to refill the bottle when it is almost empty. Systems that require bottle changes always result in product loss, as it is not always convenient to wait until the bottle is completely empty. The 2.6 litre bottle of hand sanitiser guarantees a high autonomy and avoids having to refill the system several times a day or week

### Multifunctional and customisable

- Can be used as a stand-alone solution or positioned against a wall; all controls are front-facing
- Can be equipped with two pumps on request: one at the front and one at the back
- The manufacturer can customise the white middle panel with a sticker. The used standard antibacterial powder coating is white and the two hatches are light grey. Specific colour schemes are possible on request

### Faultless and environmentally friendly

- The manual pump option avoids malfunctions in the electric system and the environmental impact of spent batteries. 6 x D battery operated

### Free product choice

- No obligation to buy the hand sanitising gel from the appliance manufacturer

### Guaranteed after sales service

- Made in Belgium: spare parts and/or repair service always available

### Manual version

### Electric version

### Tower weight

24,8 kg
