

## DÉCLARATION DES PERFORMANCES

### DoP 0239

pour le système d'injection fischer FIS V Zero (cheville à scellement pour utilisation dans la maçonnerie)

FR

1. Code d'identification unique du type de produit: **DoP 0239**
2. Usage(s) prévu(s): **Fixation dans la maçonnerie, Voir annexes, en particulier les annexes B1 - B14.**
3. Fabricant: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Allemagne**
4. Mandataire: **-**
5. Système(s) d'évaluation et de vérification de la constance des performances: **1**
6. Document d'évaluation européen: **EAD 330076-01-0604, Edition 05/ 2021**  
Evaluation Technique Européenne: **ETA-21/0267; 2021-08-27**  
Organisme d'évaluation technique: **DIBt- Deutsches Institut für Bautechnik**  
Organisme(s) notifié(s): **2873 TU Darmstadt**

### 7. Performance(s) déclarée(s):

#### **Résistance mécanique et stabilité (BWR 1)**

Résistance caractéristique à la rupture de l'acier d'un ancrage isolé sous charge de traction: Voir annexes, en particulier les annexes C1, C3

Résistance caractéristique à la rupture de l'acier d'un ancrage isolé sous charge de cisaillement avec et sans bras de levier: Voir annexes, en particulier les annexes C2, C3

Résistance caractéristique à la rupture par extraction glissement ou rupture de la maçonnerie d'un ancrage isolé sous charge de traction, facteur de réduction: Voir annexes, en particulier les annexes C5, C7, C10, C13, C15, C16

Résistance caractéristique à la rupture locale de la brique ou à la rupture en bord de la brique d'un ancrage isolé sous charge de cisaillement: Voir annexes, en particulier les annexes C5, C7, C11, C13, C15

Résistance caractéristique à la rupture de la brique d'un groupe de chevilles sous charge de traction: Voir annexes, en particulier les annexes B13, B14, C4, C6, C8, C9, C12, C14

Résistance caractéristique à la rupture locale de la brique ou à la rupture en bord de la brique d'un groupe de chevilles sous charge de cisaillement: Voir annexes, en particulier les annexes B13, B14, C4, C6, C8, C9, C12, C14

Distances au bord, entraxes, épaisseur du support: Voir annexes, en particulier les annexes B2, B13, C4, C6, C8, C9, C12, C14

Déplacements sous charge de traction et de cisaillement: Voir annexes, en particulier les annexes C17

Couple de serrage maximum: Voir annexes, en particulier les annexes C4, C6, C8, C9, C12, C14

#### **Sécurité en cas d'incendie (BWR 2)**

Réaction au feu: Classe (A1)

Résistance au feu sous charge de traction et de cisaillement avec et sans bras de levier, distances au bord et entraxes minimums: NPD

#### **Hygiène, santé et environnement (BWR 3)**

Contenu, émission et/ou rejet de substances dangereuses: NPD

8. Documentation technique appropriée et/ou documentation technique spécifique: **-**

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Dr.-Ing. Oliver Geibig, Directeur Général Business Units & Ingénierie  
Tumlingen, 2021-09-06

Jürgen Grün, Directeur Général Chimie & Qualité

Cette DoP a été préparée en plusieurs langues. En cas de différend relatif à l'interprétation, la version anglaise prévaudra.

L'annexe comprend des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées de manière neutre).

## Specific Part

### 1 Technical description of the product

The Fischer injection system FIS V Zero for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar Fischer FIS V Zero, a perforated sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to steel failure of a single anchor under tension loading	See Annexes C 1 and C 3
Characteristic resistance to steel failure of a single anchor under shear loading with and without lever arm	See Annex C 2 and C 3
Characteristic resistance to pull-out failure or brick breakout failure of a single anchor under tension loading, Reduction factor	See Annex C 5, C 7, C 10, C 13, C 15 and C 16
Characteristic resistance to local brick failure or brick edge failure of a single anchor under shear loading	See Annex C 5, C 7, C 11, C 13 and C 15
Characteristic resistance to brick breakout failure of an anchor group under tension loading	See Annex B 13, B 14, C 4, C 6, C 8, C 9, C 12 and C 14
Characteristic resistance to local brick failure or brick edge failure of an anchor group under shear loading	See Annex B 13, B 14, C 4, C 6, C 8, C 9, C 12 and C 14
Edge distances, spacing, member thickness	See Annex B 2, B 13, C 4, C 6, C 8, C 9, C 12 and C 14
Displacements under tension and shear loading	See Annex C 17
Maximum installation torque	See Annex C 4, C 6, C 8, C 9, C 12 and C 14

### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire under tension and shear loading with and without lever arm, minimum edge distances and spacing	No performance assessed

### 3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-01-0604 the applicable European legal act is: [97/177/EC].

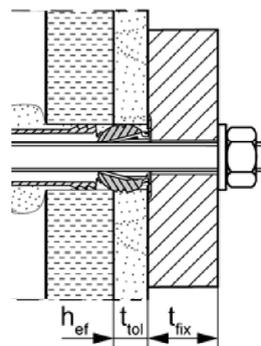

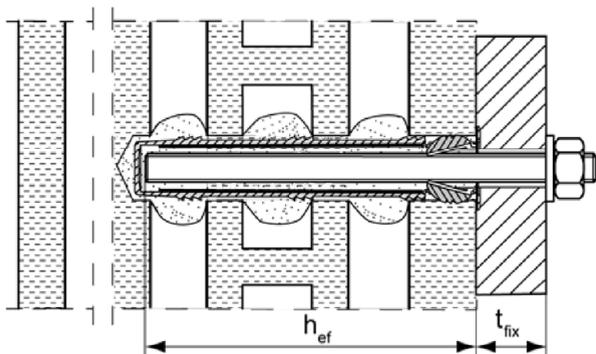

The system to be applied is: 1

# Installation conditions part 1

## Anchor rods with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

### Pre-positioned installation:

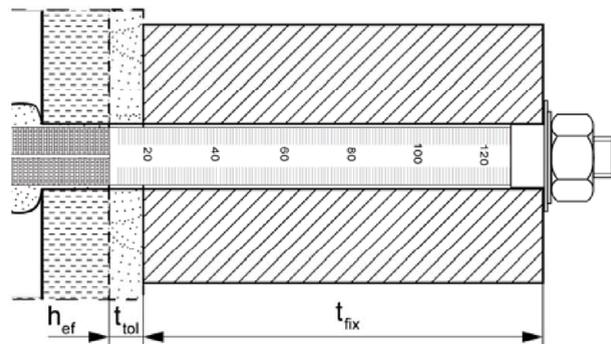

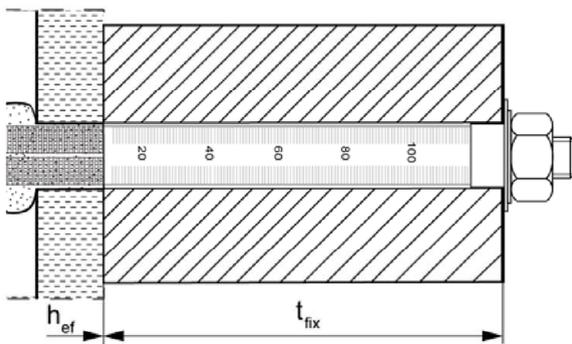

### Installation with render bridge

Size of the perforated sleeve: FIS H 12x50 K    FIS H 16x85 K    FIS H 20x85 K  
 FIS H 12x85 K    FIS H 16x130 K    FIS H 20x130 K

### Push through installation:

### Installation with render bridge

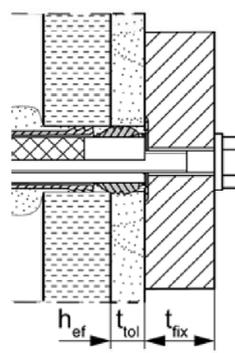

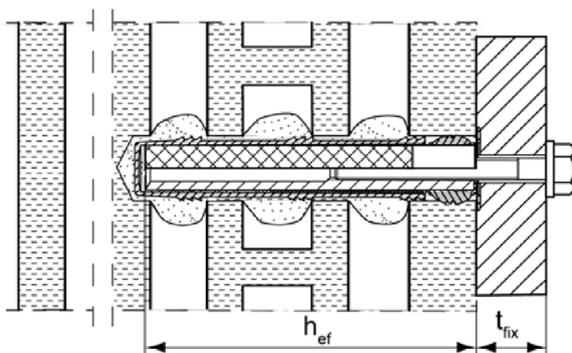

Size of the perforated sleeve: FIS H 18x130/200 K    FIS H 22x130/200 K

## Internal threaded anchor FIS E with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

### Pre-positioned installation:

### Installation with render bridge

Intended use Specifications (part 1)			

## Specifications of intended use (part 2)

### Anchorage subject to:

- Static and quasi-static loads

### Base materials:

- Solid brick masonry (base material group b), acc. to Annex B 12
- Hollow brick masonry (base material group c), according to Annex B 12
- Minimum thickness of masonry member is  $h_{ef}+30\text{mm}$
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 053:2016-04 under consideration of the  $\beta$ -factor according to Annex C 16, Table C16.1

Note (only applies to solid bricks):

The characteristic resistance is also valid for larger brick sizes, higher mean compressive strength and higher mean gross dry density of the masonry unit.

### Temperature Range:

- **Ta:** from -40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C)
- **Tb:** from -40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)
- **Tc:** from -40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel)
- For all other conditions according to EN 1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 5, Table A5.1.

fischer injection system FIS V Zero for masonry

**Intended use**  
Specifications (part 2)

**Annex B 2**

Appendix 9 / 38

## Specifications of intended use (part 2 continued)

### Design:

- The anchorages have to be designed in accordance with EOTA Technical Report TR 054:2021-05, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,b} = N_{Rk,p} = N_{Rk,b,c} = N_{Rk,p,c}$$

$$V_{Rk} = V_{Rk,b} = V_{Rk,c,II} = V_{Rk,c,\perp}$$

For the Calculation of pulling out a brick under tension load  $N_{Rk,pb}$  or pushing out a brick under shear load  $V_{Rk,pb}$  see EOTA Technical Report TR 054:2021-05.

$N_{Rk,s}$ ,  $V_{Rk,s}$  and  $M^0_{Rk,s}$  see annex C1-C3

Factors for job site tests and displacements see Annex C16

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

### Installation:

- Condition d/d: Installation and use in structures subject to dry, internal conditions
- Hole drilling see **Annex B1.1**
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) at perforated brick masonry see Annex B 6, Table B6.1
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or anchor rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E.
- Minimum curing time see Annex B 8, Table B8.2
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A 5, Table 5.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the anchor rod with the effective embedment depth. This may be done by the manufacturer of the rod or by a person on job site

# Installation instruction part 1

## Installation in solid brick without perforated sleeve

1		<p>Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole <math>h_0</math> and nominal drill hole diameter <math>d_0</math> see <b>Table B4.1; B5.1</b></p>	
2			 <p>Blow out the drill hole twice. Brush twice and blow out twice again.</p>
3		<p>Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)</p>	
4		<p>Place the cartridge into a suitable dispenser</p>	 <p>Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.</p>
5		<p>Fill approximately 2/3 of the drill hole with mortar beginning from the bottom of the hole<sup>1)</sup>. Avoid bubbles.</p>	 <p>For push through installation fill the annular gap with mortar.</p>
6		<p>Only use clean and oil-free metal parts. Mark the setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand.</p> <p>Recommendation: Rotation back and forth of the anchor rod or internal threaded anchor FIS E makes pushing easy.</p> <p>When reaching the setting depth mark, excess mortar must emerge from the mouth of the drill hole.</p>	
7		<p>Do not touch. Minimum curing time see <b>Table B8.2</b></p>	 <p>Mounting the fixture. <math>\max T_{inst}</math> see parameter of brick.</p>

<sup>1)</sup> Exact volume of mortar see manufacturer's specifications

Installation instruction part 1  
Installation in solid brick without perforated sleeve

**Annex B 9**  
Appendix 16 / 38

## Installation instruction part 2

### Installation in perforated or solid brick with perforated sleeve (pre-positioned installation)

1		<p>Drill the hole (drilling method see Annex C of the respective brick). depth of drill hole <math>h_0</math> and nominal drill hole diameter <math>d_0</math> see <b>Table B6.1</b></p>	<p>When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.</p>
2		<p>Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)</p>	
3		<p>Place the cartridge into a suitable dispenser.</p>	 <p>Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.</p>
4		<p>Insert the perforated sleeve flush with the surface of the masonry or plaster.</p>	 <p>Fill the perforated sleeve completely with mortar beginning from the bottom of the hole. <sup>1)</sup></p>
5		<p>Only use clean and oil-free metal parts. Mark the setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand.</p> <p>Recommendation: Rotation back and forth of the anchor rod or internal threaded anchor FIS E makes pushing easy until reaching the setting depth mark (anchor rod) or flush with the surface (internal threaded anchor).</p>	
6		<p>Do not touch. Minimum curing time see <b>Table B8.2</b></p>	 <p>Mounting the fixture. max <math>T_{inst}</math> see parameter of brick.</p>

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

Appendix 17 / 38

## Installation instruction part 3

### Installation in perforated or solid brick with perforated sleeve (push through installation)

1		<p>Push the movable stop up to the correct thickness of fixture and cut the overlap.</p>		<p>Drill the hole through the fixture. Depth of drill hole (<math>h_0 + t_{fix}</math>) and nominal drill hole diameter <math>d_0</math> see <b>Table B7.1</b></p>
2		<p>Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)</p>		
3		<p>Place the cartridge into a suitable dispenser.</p>		<p>Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.</p>
4		<p>Insert the perforated sleeve flush with the surface of the fixture into the drill hole.</p>		<p>Fill the sleeve with mortar beginning from the bottom of the hole. <sup>1)</sup> For deep drill holes use an extension tube.</p>
5		<p>Only use clean and oil-free metal parts. Mark the setting depth. Insert the anchor rod by hand.  Recommendation: Rotation back and forth of the anchor rod makes pushing easy until reaching the setting depth mark (anchor rod).</p>		
6		<p>Do not touch. Minimum curing time see <b>Table B8.2</b></p>		<p>Mounting the fixture. max <math>T_{inst}</math> see parameter of brick.</p>

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.
